

JobQue/X

Version 2.0

Automatic job scheduling software

JobQue/X is easy-to-use, yet powerful automated job scheduling software that allows you to define and schedule interdependent jobs in your critical IT environment. With JobQue/X, IT can automate a large number of complex tasks, processes and associated jobs across diverse applications in multiple locations.

Job scheduling is a critical component for overall IT management and it can quickly become a very complex task. Yet a job scheduler need not be an overly-complicated software product. JobQue/X makes it easy to ensure the right software task is executed at the right time and your applications continue to perform. JobQue/X allows you to plan your schedules while maintaining total control over jobs within a networked environment.

Nobix JobQue/X- it's simply what you need.

Nobix JobQue/X - Key Features

- ◆ Runs on AIX, HP-UX, Linux, Solaris, and Windows.
- ◆ Job, schedule, and event dependencies provide total control over job starting even within a networked environment as schedules can be started by calendars, other schedules, events or any combination.
- ◆ Real-time monitoring and maintenance of schedules provides control over starting, stopping, holding, releasing, manual overrides and other necessary functions.
- ◆ Job starting based on time, job completion, and events eliminates the need for manual intervention and offers total control over the timing of jobs.
- ◆ JobQue/X web interface offers access for monitor and control from virtually anywhere.
- ◆ Multiple user access features allow users to maintain their own schedules and jobs, as well as restrict access to certain JobQue/X features.
- ◆ Server group features for distribution of common schedules and other files.
- ◆ Jobs are automatically searched for error messages that you configure.
- ◆ Job environments automatically created and stdout/stderr saved for any time period.

Benefits of using JobQue/X

In addition to other intangible benefits of using JobQue/X, the benefits listed below also have associated reductions of resource costs.

- Simplified job scheduling control and efficiency
- More effective resource deployment
- Quick return on your job scheduling software investment
- Productivity increases with automated error checking that reduces the potential waste of system resources and time
- Improved flexibility and ability to respond to users' needs
- Multiple machine scheduling allows any JobQue/X system to schedule any other JobQue/X system
