

JobQue™

Automatic scheduling software for batch processing activities on the HP e3000

Do manual job streaming techniques assure that job dependencies are met accurately and efficiently?

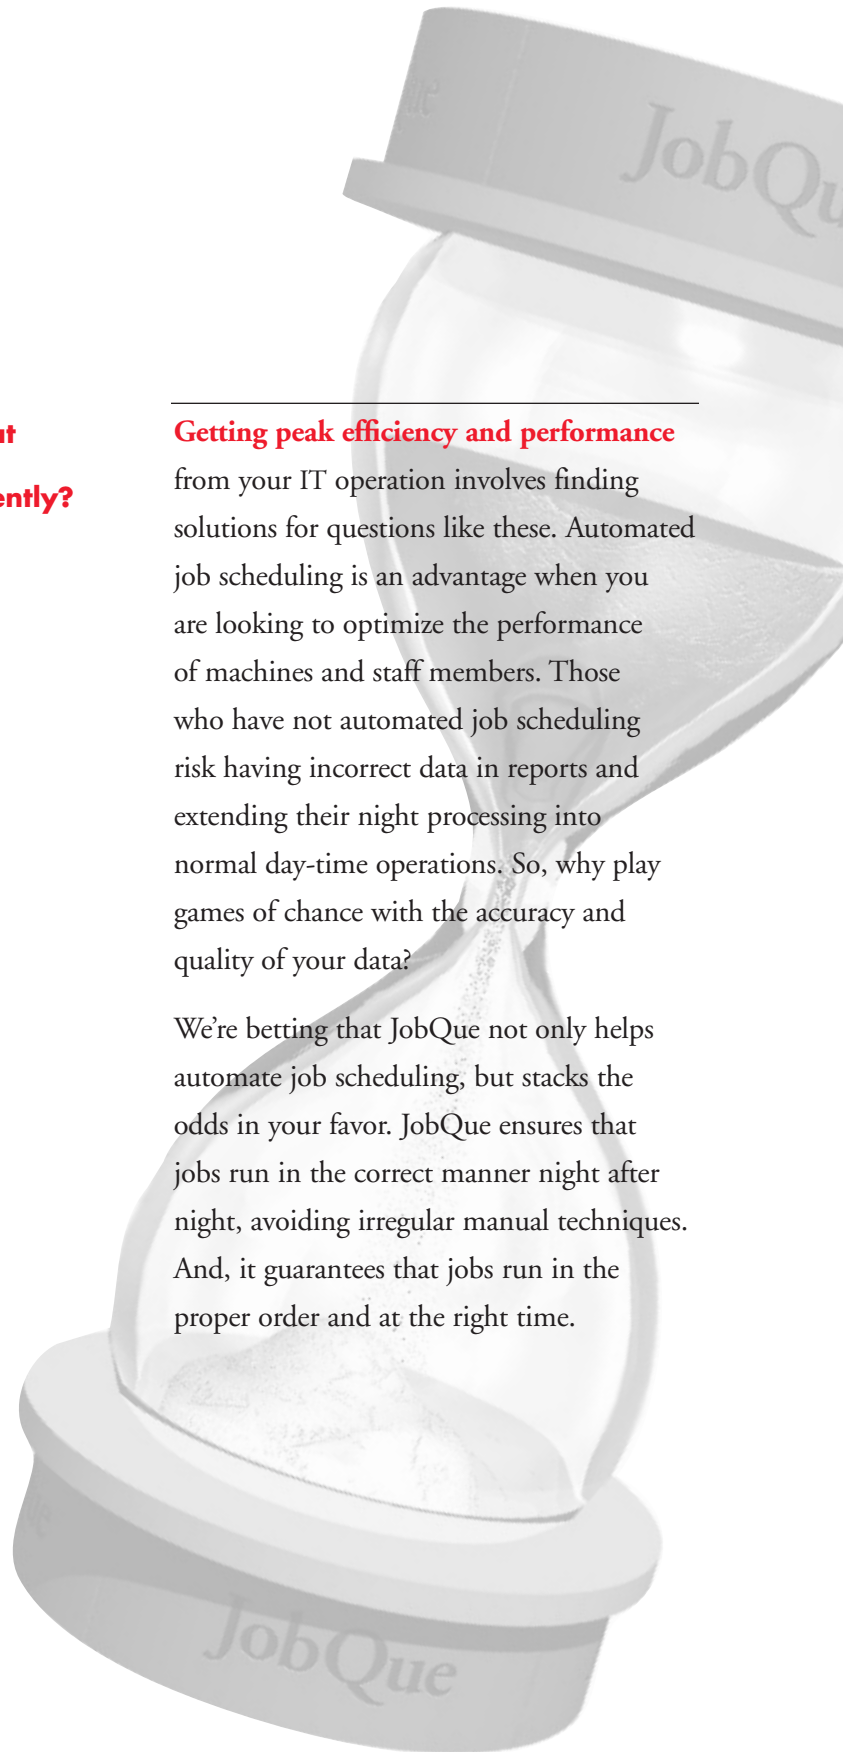

Am I maximizing CPU resources to take best advantage of the night processing window?

Is it necessary to have staff members on the premises at night to monitor jobs?

Getting peak efficiency and performance

from your IT operation involves finding solutions for questions like these. Automated job scheduling is an advantage when you are looking to optimize the performance of machines and staff members. Those who have not automated job scheduling risk having incorrect data in reports and extending their night processing into normal day-time operations. So, why play games of chance with the accuracy and quality of your data?

We're betting that JobQue not only helps automate job scheduling, but stacks the odds in your favor. JobQue ensures that jobs run in the correct manner night after night, avoiding irregular manual techniques. And, it guarantees that jobs run in the proper order and at the right time.

BENEFITS OF USING JOBQUE

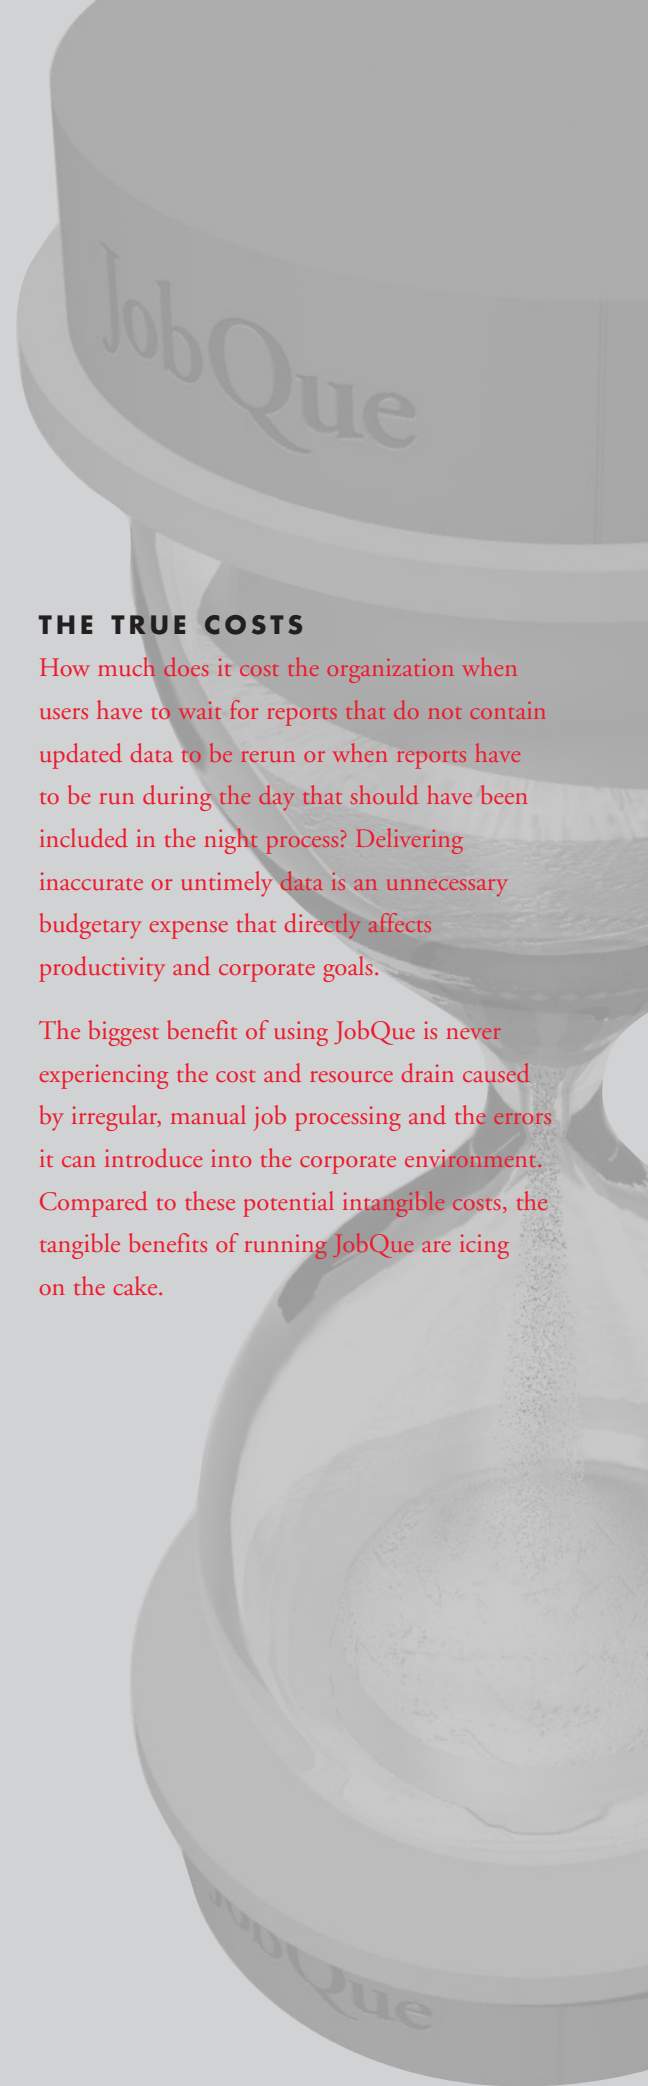

Most of the following benefits have associated reductions of resource costs. The intangible benefits of using JobQue are just as important as freeing up staff and running an automated, lights-out operation.

- Jobs run consistently and accurately
- Jobs that are not in the schedule can still be streamed manually
- Jobs are run in the correct order, and as a result applications contain the most accurate and up-to-date data
- Running jobs with controlled dependencies ensures that processing completes on time
- Automated error checking reduces the potential waste of system resources and time, and improves productivity
- Better operational control and efficiency
- More effective resource deployment
- Improved flexibility and ability to respond to users' needs

THE TRUE COSTS

How much does it cost the organization when users have to wait for reports that do not contain updated data to be rerun or when reports have to be run during the day that should have been included in the night process? Delivering inaccurate or untimely data is an unnecessary budgetary expense that directly affects productivity and corporate goals.

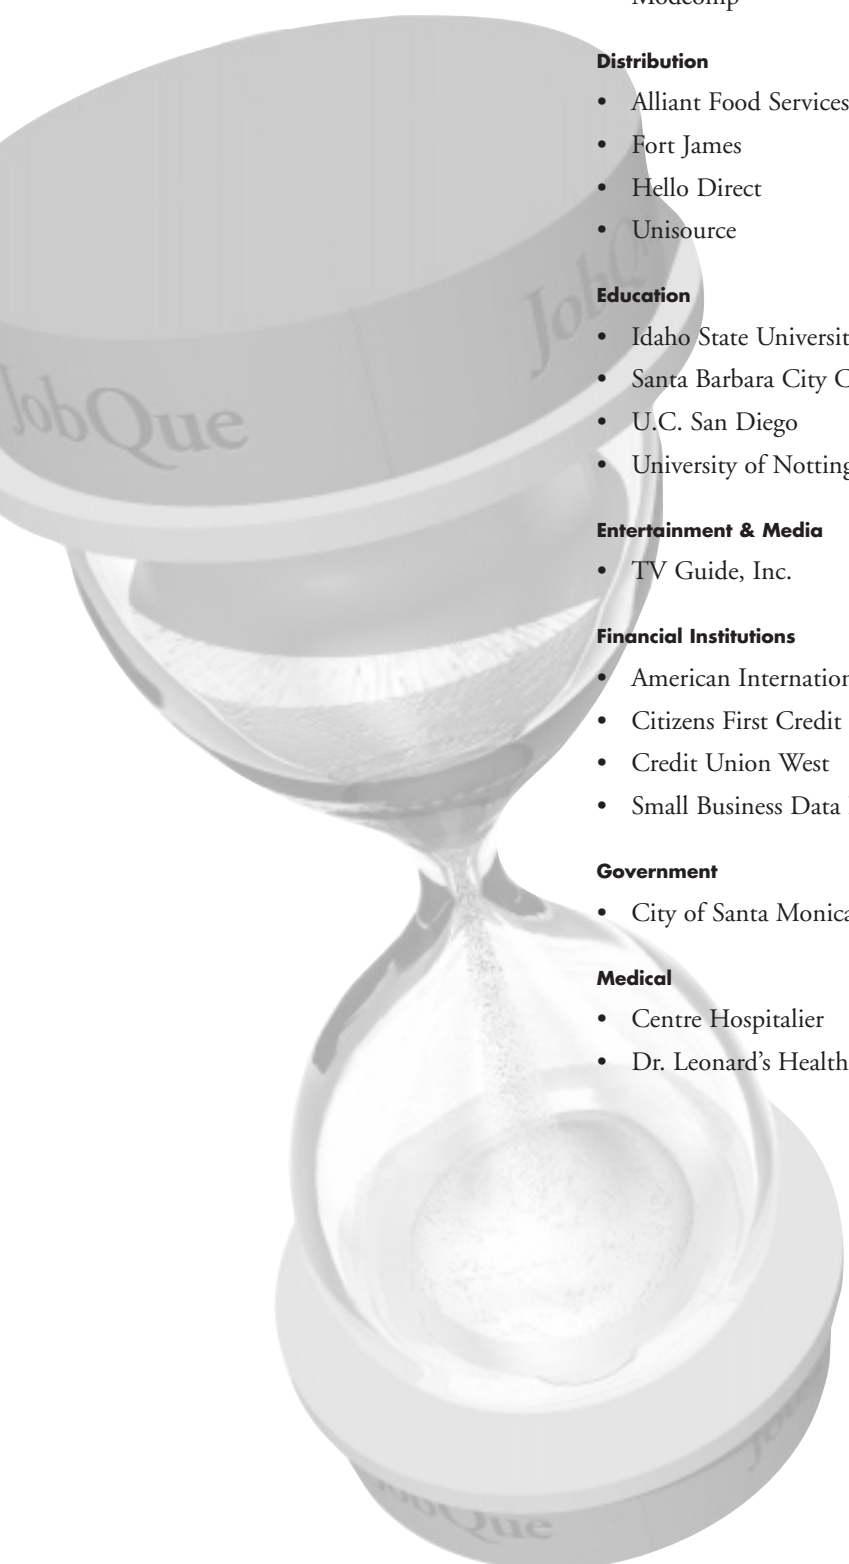

The biggest benefit of using JobQue is never experiencing the cost and resource drain caused by irregular, manual job processing and the errors it can introduce into the corporate environment. Compared to these potential intangible costs, the tangible benefits of running JobQue are icing on the cake.
